

Vype ePen Use Guide

How do I use my Vype?

Insert your Vype **cartridge** into the main Vype ePen 3 device. You will hear a click once it fits in to place.

To switch on, quickly press the button 3 times.

The button is found on the front, smooth edge of the device.

To release the vapour, put the tip in your mouth, close your lips round it and **press down** on the button at the same time as **inhaling**.

Vaping is not like smoking, you need to **take a few sips** of vapour regularly throughout the day. Don't take long drags or finish it all in one go like a cigarette – graze in it rather than binge on it. If you inhale continuously for more than 8 seconds, it will automatically shut down.

To switch it off, press the button quickly three times.

The Vype will automatically switch off if it hasn't been used for 10 minutes. You need to turn it back on to use it again.

How often should I change the cartridge?

A cartridge should last a day if you are used to smoking about 20 cigarettes a day, longer if you're used to smoking less cigarettes. You'll know it's time to change it when there's only a tiny amount of liquid left in the cartridge, or it stops producing vapour, or the taste changes. When the cartridge is empty, throw it in the bin and replace it with a new one.

What nicotine strength should I use?

You may find it best to go for the highest nicotine strength to begin with to best match what you are used to getting from cigarettes. If one strength feels too strong, drop it down, if you find you need to puff a lot, increase the strength. If you....

Usually smoke 20+ cigarettes try the 18mg ■ Usually smoke 13-20 cigarettes try 12mg.

Usually smoke 5-12 cigarettes try 6mg ■ Usually smoke 1-4 cigarettes use 0-6mg.

How do I charge my Vype?

It comes 80% charged and can be used straight away. To fully charge it, only use the charger in the starter Kit. Insert the USB charging lead into the micro USB port on the base of the device.

Connect the other end of the USB charging cable into a charging port. When the light turns **green** & is no longer flashing, this means it is now fully charged & should be disconnected. It should take two hours to fully charge your Vype.

Keep your charge topped up.

The small light on the front of the Vype will indicate when it needs to be charged.

A **green** light means it has plenty of charge. An **amber** light means it is starting to run low.

A **red** light means it needs to be charged. A fully charge Vype should last about 200 puffs, but will depend on how you use it. Keep it turned off when not using it, to save the battery.

Safety tips

- **To prevent infection DO NOT share your Vype with others**
- Don't put it in water or anywhere too hot or too cold
- If you get any of the liquid on you skin, wash off with soap and water. If you accidentally swallow a cartridge, seek medical advice.
- Only use the charging kit that comes in the starter pack. Don't put it in your pocket with coins and keys
- Keep it clean with antibacterial wipes or a dry cloth.
