

FIT Admin Pathway

1

Labelling FIT Kit

Ensure TQuest, ICE or other test request label is applied to test kit **before** passing the kit & instructions to the patient.

2

Add patient name & DOB to test label

If test request label is unavailable, staff should write patient's **full name & DOB** on FIT sample tube and remind patient THEY will need to write on the tube the date & time they collect their sample.

3

Patient Information Leaflet (PIL)

Has the patient been given the instruction leaflet on how to complete the FIT?

FIT leaflet in translated versions can be found here:
<https://www.healthylondon.org/suspected-cancer-referrals/patient-information-leaflets/>

4

Explain to the patient what they must do next

Ask the patient to follow instructions on how to collect the sample and to return it to the practice ASAP (**no longer than 7 days**) to help diagnose cancers quickly.

5

Safety Net this patient

The patient should now be added to the GP practice safety netting system to ensure that the FIT is returned.

Recap:

- Check FIT test is **labelled correctly**.
- Check patient is **aware of the importance** of returning the kit.
- Check they are given the **Patient Information Leaflet (PIL)**.
- Check that patient has been added to the **GP practice safety netting system**.
- More FIT kits can be ordered from your local lab.
